

Do green revenues translate into green alpha?

Philipp Krueger

University of Geneva, Swiss Finance Institute, and ECGI

based on joint research with **Johannes Klausmann** and **Pedro Matos**
(University of Virginia - Darden School of Business)

Geneva Sustainable Investment Insights, Geneva 2024

Introduction

- Historically, sustainable investing in public equity markets focused mostly on incorporating traditional ESG criteria into investment decisions
- Examples of traditional ESG criteria
 - workplace safety, water use, GHG emissions, human rights concerns, diversity on boards, etc.

More recently, increasing interest in “sustainability themed investing”

Development of sustainable investment approaches

(in CHF billion) (n=81)

% of total sustainability-related volumes applying respective approach

What is Sustainability-themed investment?

*“Investment in businesses contributing to sustainable solutions, both in **environmental** or **social** topics.”*

Source: Swiss Sustainable Investment Market Study 2023 (SSF)

What do we do in our research?

- Study stock market listed firms that provide “*environmental solutions*”
 - Focus on firms that sell “green” products and services (i.e., generate “green revenues”)
- **Note:** Having “green revenues” is very different from having good ESG scores
 - Green revenues exhibit low correlations with traditional ESG scores or GHG intensities

What do we do in our research? (contd.)

- 1. Question :** What is the size of the green economy?
 - How prevalent are “green revenues” among stock market listed firms?
 - What are the main sectors generating green revenues?
 - Are there specific countries with more green revenues?
- 2. Question :** What drives green revenues?
- 3. Question :** Do green revenues translate into investment returns?

Data

- Global sample of >16,000 firms from 48 countries
- Study period: 2008 to 2022
- Data: **FTSE Russell Green Revenues Data**
 - The data classifies firms' corporate revenues into green "activities"
 - Different granularities: Sectors, subsectors, micro-sectors
- **Main dimension of interest:**
Green Revenues = revenues a company derives from "green" products and services
 - Percentage green revenues (of total revenues)
 - Dollar green revenues

Outline

- 1. Question :** What is the size of the green economy?
 - How prevalent are “green revenues” among stock market listed firms?
 - What are the main sectors generating green revenues?
 - Are there specific countries with more green revenues?
- 2. Question :** What drives green revenues?
- 3. Question :** Do green revenues translate into investment returns?

Question 1: How big is the green economy?

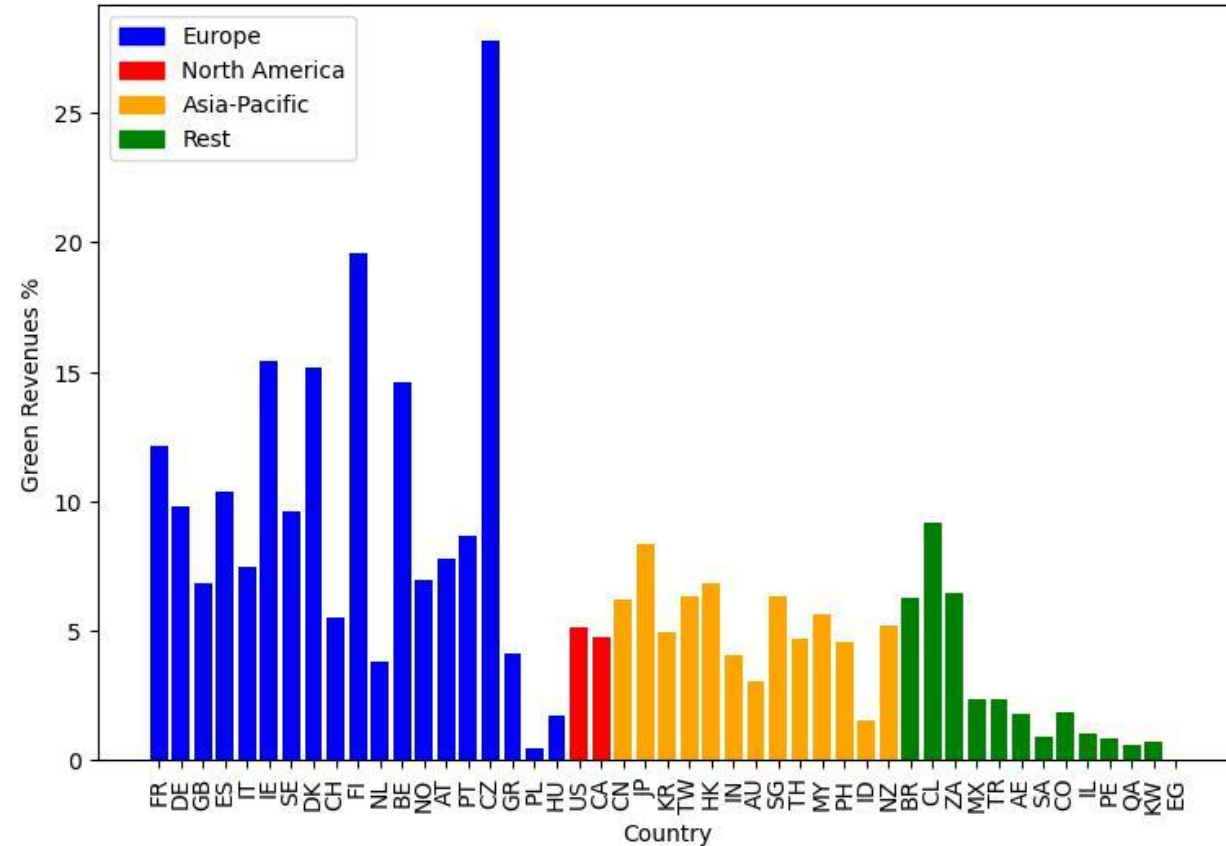

Green revenues by country

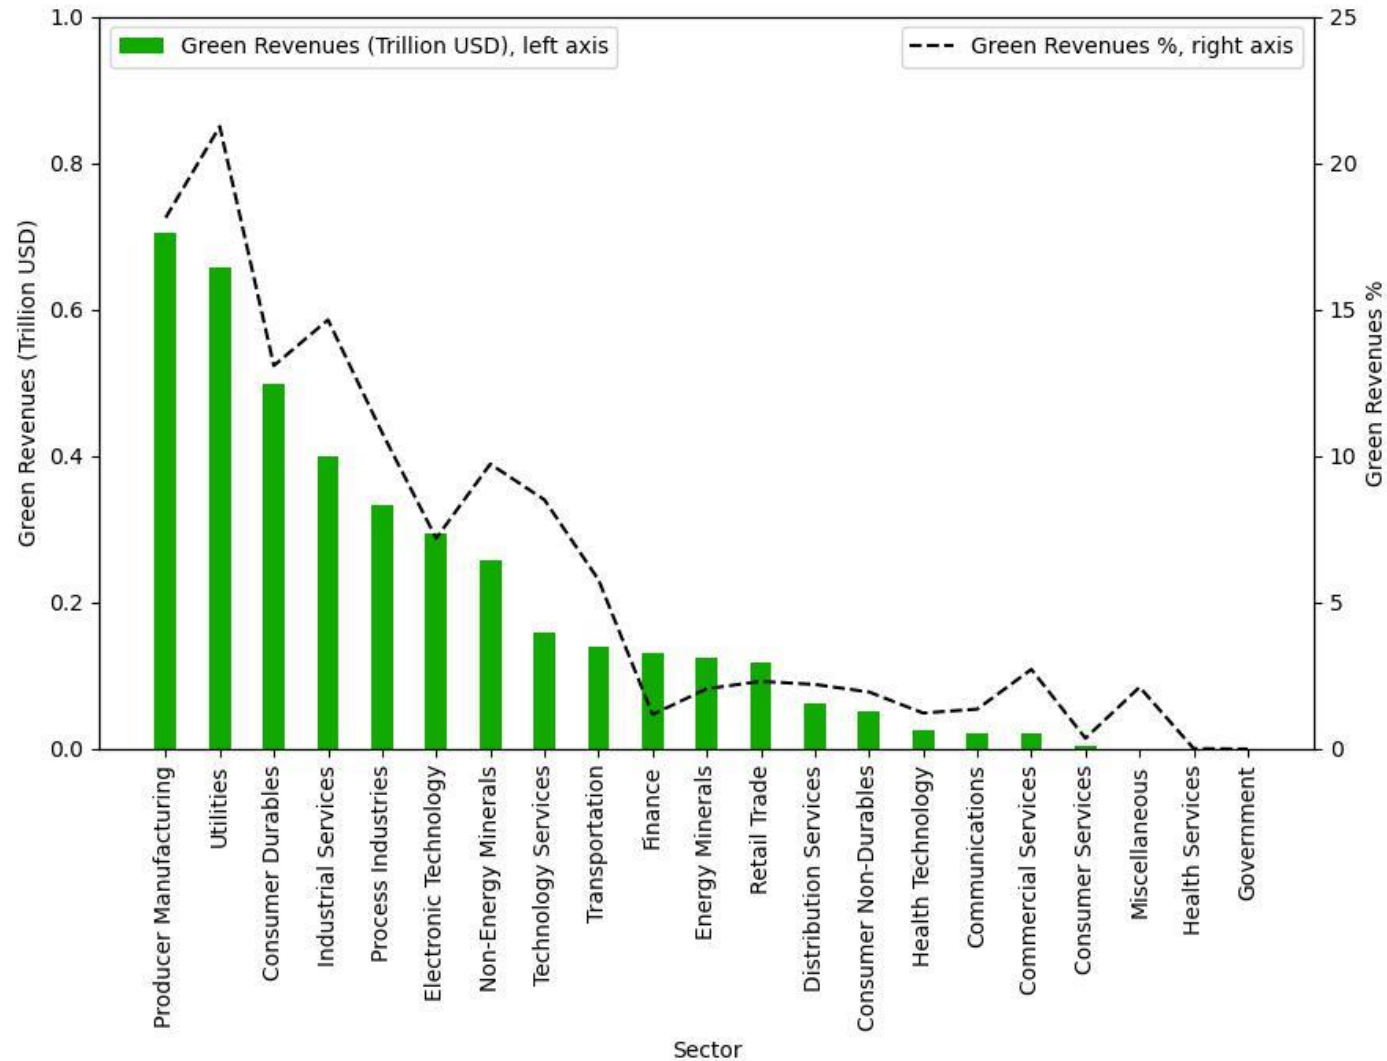

Absolute (trillion USD)

Relative (% of total revenue)

Which sectors generate most green revenues?

Outline

1. **Question** : What is the size of the green economy?
 - How prevalent are “green revenues” among stock market listed firms?
 - What are the main sectors generating green revenues?
 - Are there specific countries with more green revenues?
2. **Question** : What drives green revenues?
3. **Question** : Do green revenues translate into investment returns?

Three drivers of green revenues

1. Green innovation

- Firms with more green patents generate higher green revenues

2. Regulation

- Regulatory push towards sustainability (e.g., EU Taxonomy, etc.) in Europe resulted in higher green revenues

3. Institutional ownership

- Firms with high institutional ownership generate higher green revenues
 - Ownership by long-term-oriented institutions (i.e., institutions with lower portfolio turnover) most relevant
 - ESG investors (i.e., signatories PRI investors) do not play a role

Outline

1. **Question** : What is the size of the green economy?
 - How prevalent are “green revenues” among stock market listed firms?
 - What are the main sectors generating green revenues?
 - Are there specific countries with more green revenues?
2. **Question** : What drives green revenues?
3. **Question** : Do green revenues translate into investment returns?

Is there a green alpha from investing in firms with high green revenues?

- Evaluate the performance of several value-weighted portfolios:
 1. all green stocks (green revenues $> 0\%$)
 2. stocks with green revenues $> 20\%$
 3. stocks with green revenues $> 50\%$
 4. stocks with green revenues $> 80\%$

- The higher the green revenues of the portfolio firms, the higher the cumulative stock returns of the portfolio since 2008
- But, graph suggests differences pre and post-Paris

Is there a "green alpha" when controlling for known asset pricing factors?

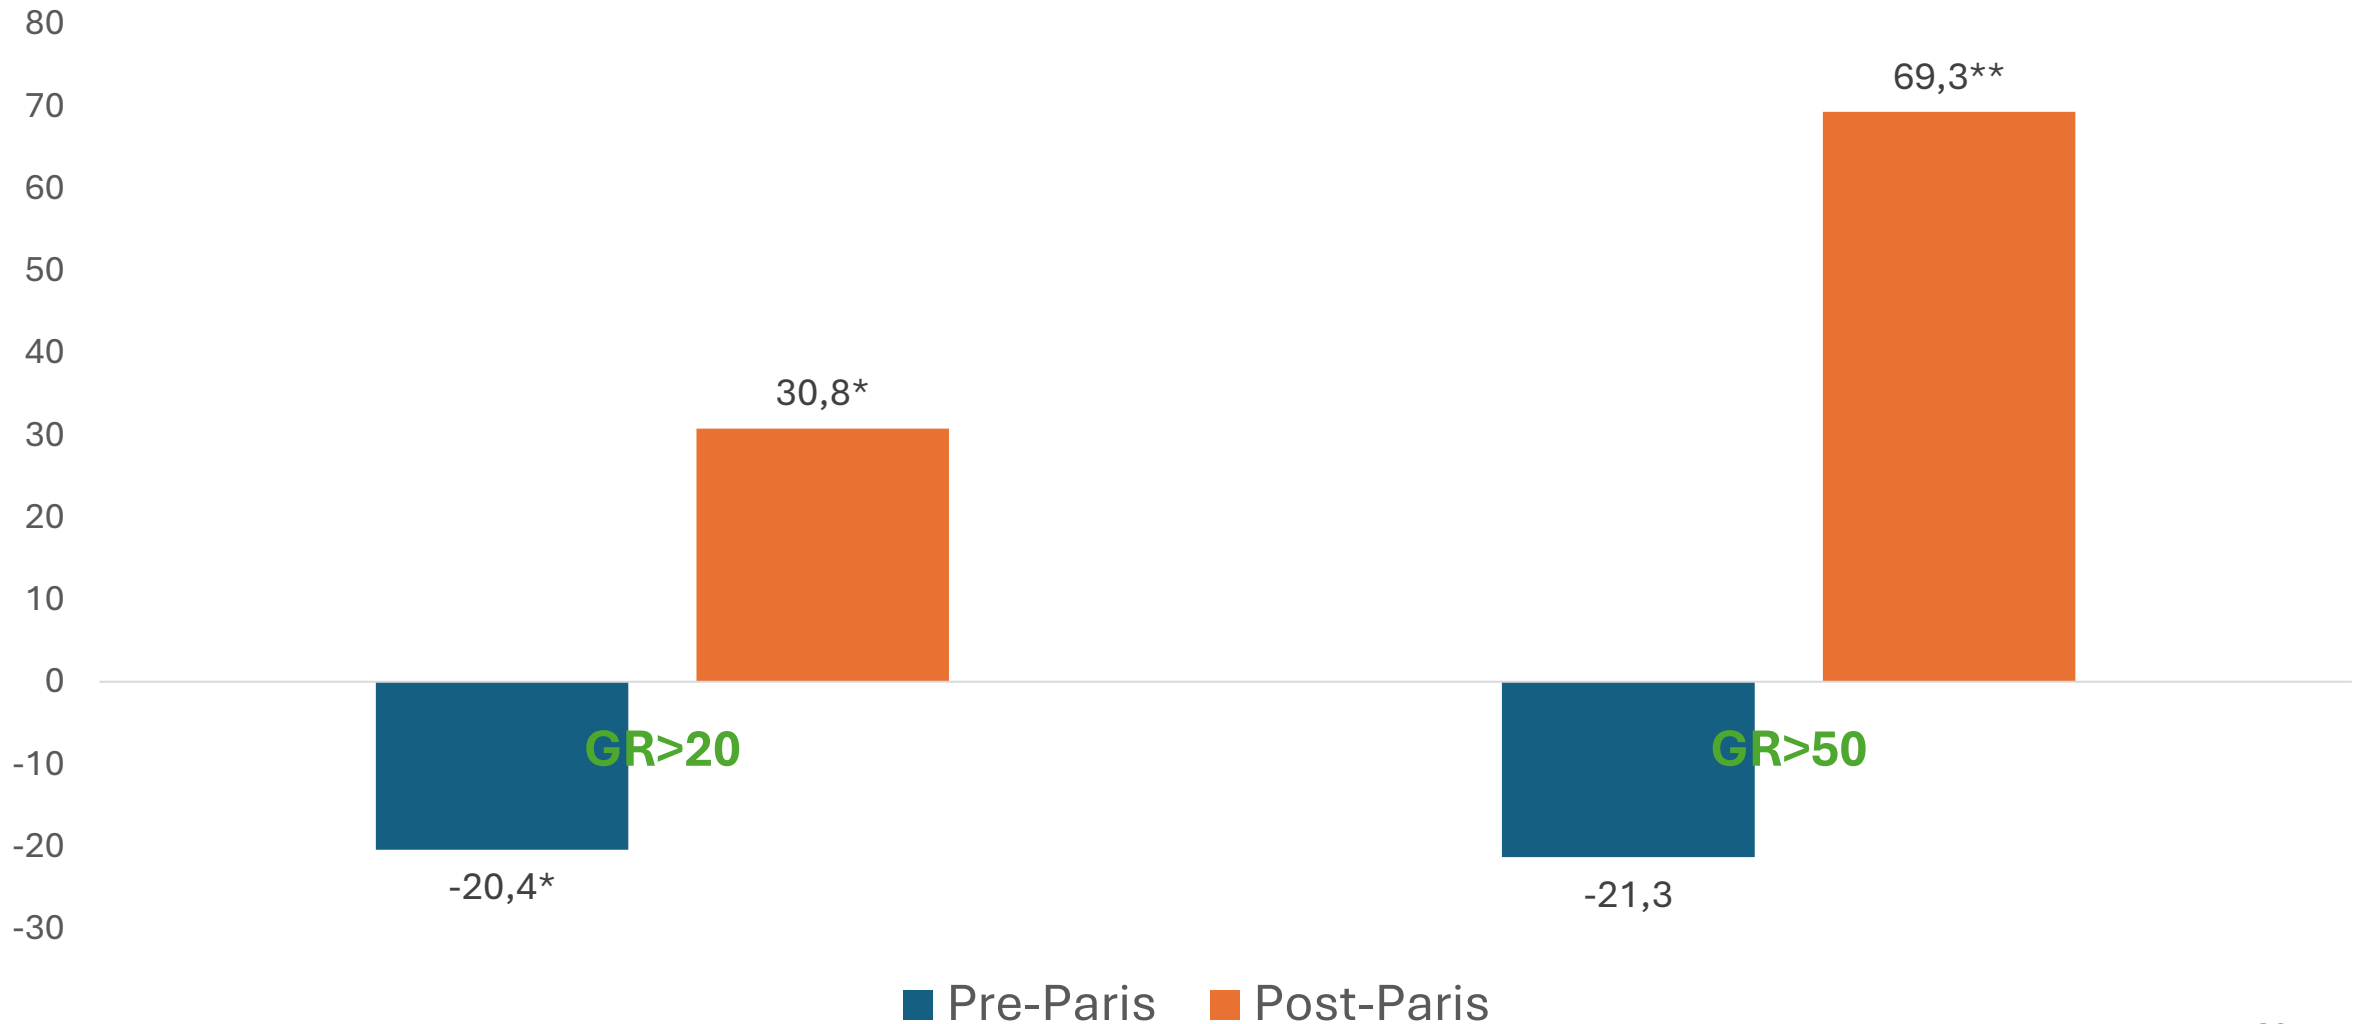

(Average monthly alpha (in bps))

*** p<0.01, ** p<0.05, * p<0.1

Five-Factor Alphas - Pre- and Post Paris

(Average monthly alpha (in bps))

*** p<0.01, ** p<0.05, * p<0.1 ²⁶

Five-Factor Alpha GR>50 Portfolio (by country, and subperiod)

*** p<0.01, ** p<0.05, * p<0.1 27

Conclusions and main findings

- **Q1: Sizing the green economy**
 - In 2022, the green economy was about USD 4tn (roughly the size of the Oil & Gas sector)
 - Acceleration post 2015
 - US and China largest in terms of absolute green revenues, but Europe has higher relative green revenues
- **Q2: Identify the drivers of the green economy**
 - #1 - Corporate innovation: taking green patents to market
 - #2 - Public policies: European Sustainable Finance regulatory push
 - #3 - Ownership: institutional owners, in particular long-term oriented ones
- **Q3: Study the financial returns from investing in green firms**
 - Is there a green alpha? Weak alpha for the firms with highest green revenues
 - Largely concentrated among US firms
 - Green alpha, if at all, materializes mostly post-Paris

Thank you for your attention.
